7 Years in
DevOps and
Cloud Business

can help you level up
your business agility

DevOps-as-a-Service

Great match if you want to transform the way you deliver or run software and stay ahead in today's fast-changing market. Say goodbye to manual processes, troublesome launches, or lack of control and monitoring.

- Manage your entire software development lifecycle
- Optimize and configure environment for maximum efficiency
- Plan, build, and implement new application architecture & infrastructure changes
- Build efficient CI/CD pipelines for apps and services
- Implement zero-downtime deployment strategies
- Support with implementing from scratch or migration to microservices
- Containerize applications and components
- Effectively manage costs through strategic planning, accurate prediction, and efficient scaling of your capacity and resources

can empower your
businesses with
flexibility

Cloud Migration Service

Optimal choice if you want to transform your business and accelerate innovation. With migration to cloud, you can modernize and optimize your infrastructure, improve reliability, boost security, and leverage advanced cloud services to drive growth and lead the industry.

- Advising for Cloud migration
- Cloud readiness assessment
- Infrastructure migration planning
- Architected infrastructures on public or hybrid cloud
- Data, applications, and services migration to the cloud
- Cloud infrastructure monitoring and management
- Billing, scaling, planning of system tolerance
- Disaster recovery planning, implementation, and procedures verification
- Backup strategy planning, testing, validation, and implementation
- Cloud training, documentation, and knowledge transfers

can help to protect
all your crucial data
and assets

Infrastructure Security Services

Seamless fit for any business that puts its own and users' data security first. Identify vulnerabilities and overcome any threats while adhering to specific compliance standards and regulations with security experts on board.

- Cloud assessment with an overview of existing infrastructure
- Billing, scaling, planning of system tolerance
- Disaster recovery planning, implementation, and procedures verification
- Backup strategy planning, testing, validation, and implementation
- Compliance assessment preparation (including ISO 27001, SOC2, PCI DSS, HIPAA, GDPR, CIS Benchmarks, OWASP, and Google Certified Developer)

can help keep your
cloud infrastructure
running smoothly

Managed Cloud Services

An ideal match for businesses that want to transfer the weight of operating their cloud infrastructure to external experts. Get ongoing cloud management and first-hand insights with minimum effort and maximum efficiency. You focus on your growth and innovation while we take care of the rest.

- Ongoing infrastructure management
- Real-time insights into cloud environment
- Proactive checks and offload monitoring
- Backup strategy creation
- Backup system management and verification
- Fine-tuning and optimization of the cloud infrastructure
- Improvements backlog creation and prioritization
- Budgets of infrastructure costs analysis and improvement

can help you always
provide the best
customer experience

Emergency & Monitoring Services

Perfect choice if you want to transform worries about your software into valuable actions. Identify weaknesses, prepare an action plan, and get certified experts as the first point of contact to handle incidents and emergencies. And the best part: charge only for actions and efficient results, not standstill.

- Proactive reacting to defined incidents and emergencies
- Identification, prediction, and prevention of infrastructure risks and flaws
- Creation of an escalation system
- Cloud security monitoring and management
- Costs optimization and extra expenses avoiding
- Site uptime, performance, and stability maximizing

How we work

→ **Team extension**

→ **Fixed scope**

→ **Time & Materials**

Sustainable infrastructure is crucial for sustainable business!
